

# THE TECHNICAL BUILDING BLOCKS OF UNISON PLANNING™

OMP connects every supply chain player - leaders, planners, site managers - in one comprehensive solution, freeing them to make decisions in unison. To achieve this, the solution rests on a number of technical building blocks, powered by human expertise and commitment. Here's an overview of how each building block contributes to working in unison.

OMP.

**1**  
**one digital model**  
**representing your**  
**total supply chain**

## One shared model reflecting reality

At the core of Unison Planning™ is the digital model, a virtual representation of your supply chain, with all the production, storage and distribution assets included, along with their capacities, performance capabilities and constraints. This flexible model, harnessed to industry-specific logic, reflects reality at exactly the level of detail needed to plan effectively.

# Unifying strategy, tactics and operations

**100%**  
**full scope planning  
technology**

From strategic to operational  
decision-making

Automatic information  
syncing across functions

Unison Planning™ integrates every supply chain planning function within a single comprehensive solution. It includes strategic functions such as network design, tactical functions such as demand management, sales & operations planning, and operational functions such as master planning and scheduling. Planning data, decisions and constraints are automatically exchanged across the different functions using the shared model as a solid foundation.
